

# Survey: Modern No Scalpal Vasectomy vs Old Method

---

The figures below are from a study of 560 patients at a practice in Surrey.

	NSV	Old Method
Infection	0.2%	3.5%
Pain/swelling/bruising	0.5%	3.5%
Haematoma	0.2%	2%
Epididymitis	0.8%	3%
Sperm granuloma	0.5%	1%
Recovery time	1.5 days	3.5 days

I think these figures illustrate why NSV is the 'Gold' Standard. My own surveys pre and post retraining have shown:

23% reduction in pain during the procedure

59% reduction in pain following the procedure (on average now 1.3 days)

46% reduction in any discomfort following the procedure (on average now 3.5 days)

75% found very little or no pain at all pain during the procedure

80% found very little or no pain at all following the procedure

90% said it was a better experience than they were expecting

100% said they would recommend it to a friend

**Overall it is a much better method than the traditional version. All vasectomies should be No-Scalpel, there's no good reason to go for anything else!**
